

• In addition to routine checks for each use, PPE should regularly undergo a detailed inspection by a competent person. Petzl recommends an inspection every 12 months and after any exceptional event in the life of the product.
 • PPE inspection should be conducted with the manufacturer's Instructions for Use.
 Download the instructions at PETZL.COM.

Good condition (G)	To monitor (TM)	To repair (TR)	Do not use, retire (R)	N/A Not applicable

1. Known product history

Usage conditions or exceptional event during use (examples: fall or fall arrest, use or storage at extreme temperatures, modification outside manufacturer's facilities...):

----------------------------------	-----------------------	-----------------------	-----------------------	-----------------------	-----

2. Preliminary observations

Verify the presence and legibility of the serial number and the CE mark.
 Verify that the product lifetime has not been exceeded.
 Compare with a new device to verify there are no modifications or missing elements.

-----------------------	-----------------------	-----------------------	-----------------------	-----------------------

3. Inspecting the frame

To properly inspect your connector, move any equipment that conceals any part of the frame: e.g. lanyard, energy-absorbing lanyard with STRING, TRAC trolley.

- Check the condition of the frame (e.g. deformation, cracks, marks, wear, corrosion).
- Check for wear caused by the rope's passage, or by contact with anchors (e.g. depth of marks: wear greater than one mm deep is serious, sharp edges start to form).
- Check the condition of the nose (e.g. deformation, cracks, marks, wear, corrosion).

-----------------------	-----------------------	-----------------------	-----------------------	-----------------------

4. Inspecting the gate (depending on connector model)

- Check the condition of the gate (e.g. deformation, cracks, marks, wear, corrosion).
- Verify the Keylock hole is clear.
- Check the condition of the rivet (e.g. deformation, cracks, marks, wear, corrosion).
- Manually verify that the gate opens completely.
- Verify that the gate closes automatically, that the return spring works, and that the gate and nose align properly.

<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
-----------------------	-----------------------	-----------------------	-----------------------	-----------------------

5. Checking the manual locking sleeve (depending on connector model)

- Check the condition of the locking sleeve (e.g. deformation, cracks, marks, wear, corrosion).
- Verify that the locking sleeve can completely lock and unlock the connector. If necessary, clean with soap and water, then lubricate lightly (e.g. with graphite powder). Verify that the locking sleeve cannot be turned when in its normal stop position (i.e. stripped threads).

<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
-----------------------	-----------------------	-----------------------	-----------------------	-----------------------

6. Checking the automatic locking sleeve (depending on connector model)

- Check the condition of the locking sleeve (e.g. deformation, cracks, marks, wear, corrosion).
- Verify that the unlocking system works properly, according to the opening method described in the connector's Instructions for Use.
- Check that the connector locks automatically when you release the gate and the sleeve. If necessary, clean with soap and water, then lubricate lightly (e.g. with graphite powder).

<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
-----------------------	-----------------------	-----------------------	-----------------------	-----------------------

7. Gate system on OPEN connectors

- Check the tightening torque of the screws using a torque wrench (the tightening torque is specified in the Instructions for Use of the equipment).
- Remove the screws to check the equipment separately, only if the condition of the equipment requires it. In this case, see the mounting instructions indicated in the Instructions for Use.
